

# Gedae 5.0.3 Release Notes

September 2006

Address: Gedae, Inc.  
1247 N Church St, STE 5  
Moorestown, NJ 08057

Telephone: (856) 231-4458  
FAX: (856) 231-1403  
Internet: [www.gedae.com](http://www.gedae.com)

This is a minor release that fixes two bugs in Gedae 5.0.3.

## **1 Bugs Fixed**

### **SCR2386 Dy4 Install Requires Copying Cygwin Tools**

As part of the Dy4 install, users must copy `cygwin1.dll` and `rsh.exe` from `\cygwin\bin` to `%GEDAE%\nt\bin`. Gedae uses the Cygwin `rsh` to communicate to the Dy4. Previous versions shipped these two files with Gedae, but this commonly caused problems when the user's Cygwin install conflicted with the Cygwin version Gedae tests and ships with.

### **SCR2376 Saving Partition Mappings Fails**

Group settings set via the mapping table are not saved correctly in many cases. This problem was introduced in Gedae 5.0.2.

### **SCR2374 Remove Perl Distribution for non-Windows Versions**

Gedae included Perl in all its releases. Sometimes Gedae's Perl conflicted with the Perl installed on the system, preventing successful installation. The Perl distribution was removed from the Unix versions of Gedae, and the build and install scripts were changed to use Perl from the path instead of an absolute path to the Gedae system directories.
